

Pan-Abode is Energy Efficient!

Pan-Abode is continually adapting our practices to meet the latest energy code requirements.

To maximize the energy efficiency of your Pan-Abode home while saving money on your monthly utility bills, every permanent residence we build is reviewed by a Certified Energy Advisor for full Building Code compliance.

This is achieved by assessing your Pan-Abode's overall energy performance and providing a rating based on the home's annual energy usage. Where required, the Certified Energy Advisor will recommend one or more Energy Conservation Measures (ECM's) to ensure the performance of your Pan-Abode home meets or exceeds the energy code standards for your specific build location.

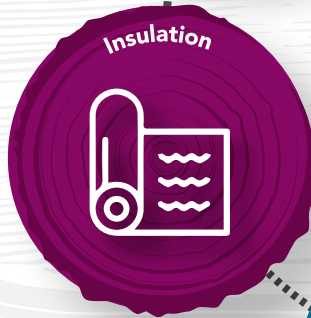

- 1 Work with our energy advisor**
Customers work with Pan-Abode's Certified Energy Advisors to assess the energy efficiency of their Pan-Abode home.

- 2 We assess geographic location**
Depending on the energy efficiency requirements in effect for the customer's build location, the Energy Advisor may recommend certain Energy Conservation Measures (ECMs).

- 3 We recommend ECMs!**
Our customers then work with the Energy Advisors to select the bundle of ECMs that work for them while also meeting their area's Energy Code requirements.

Examples of Energy Conservation Measures
